

Human Oversight & RACI — UC-2041

Commercial Banking Policy Knowledge Assistant

Oversight Model

The use case is **advisory only**. The relationship manager (RM) receives a cited answer and independently decides whether and how to act. The system takes no action and communicates nothing to customers. Human judgment sits at every consequential step by design; there is no automated decision to oversee.

RACI

Activity	Responsible	Accountable	Consulted	Informed
Use of assistant output	RM	Director, Commercial Banking Ops	Credit Policy	—
Corpus curation	Enterprise AI Platform	Director, Commercial Banking Ops	Credit Policy	MRM
Control monitoring	Enterprise AI Platform	MRM	—	Business sponsor
Re-tiering decision	MRM	Chief Model Risk Officer	Business sponsor	Internal Audit

Friction at Decision Points

Not applicable in the automated sense — the assistant produces no decision. RMs are trained that outputs are reference material to be verified against the cited source before reliance. Usage guidance is surfaced in the interface on every session.
